BROOKS® INSTRUMENT

Beyond Measure

MT3809G Series

Metal Tube Variable Area Flow Meters for High Pressures and Extreme Temperatures

Brooks® MT3809 all-metal flowmeter has been the "go-to" meter for decades and the choice of Engineering, Procurement and Construction (EPC) companies. Its operation is based on the variable area principle and is ideal for a variety of gas, liquid and steam applications. These meters are indispensable where high pressures or high temperature operating conditions exist.

The primary meter is available in 316/316L stainless steel as well as with an ETFE liner. But a wide range of corrosion resistant materials of construction are available which makes it a perfect fit for metering of aggressive applications.

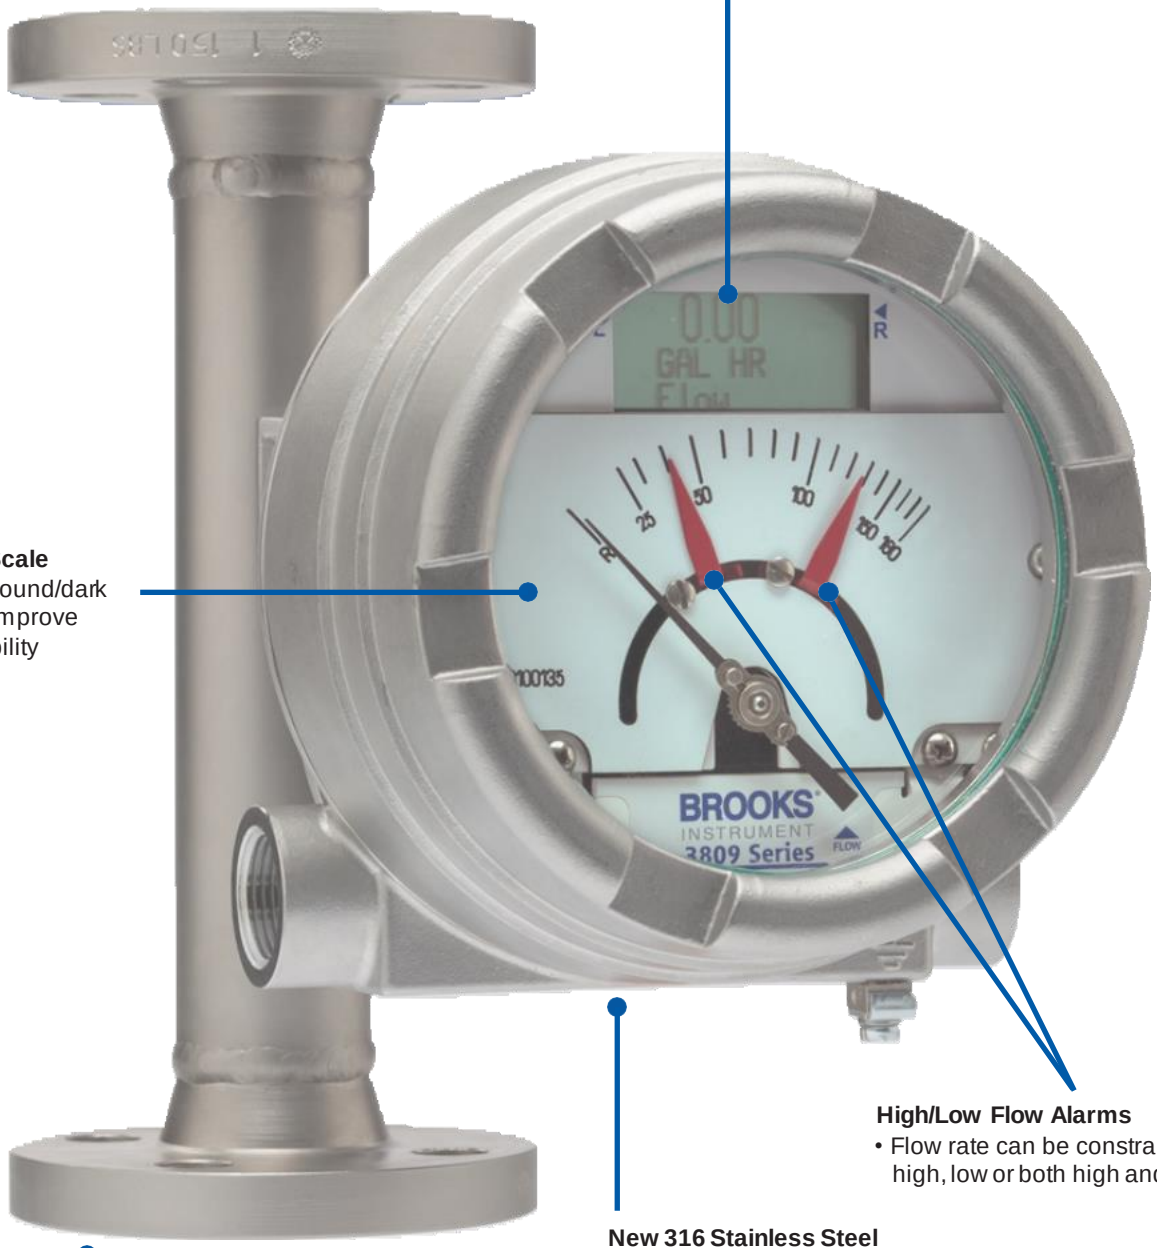
A broad range of connection sizes and types such as ASME, DIN and JIS flange choices along with several threaded options provide for flexible installations.

The very popular mechanical indicator option does not require power which reduces installation costs and is a cost-effective solution for flow measurement in hazardous areas. Optional accessories available includes transmitter with 4-20 mA analog output with HART® communications or FoundationTM Fieldbus communications with or without configurable alarms and pulse output for totalization. Also available are front adjustable inductive alarms, high temperature or stainless steel indicator housings, valves, flow controllers and certifications.

Features & Benefits

Transmitter with 4-20mA/HART-7 or FoundationTM Fieldbus Communications
Local Operator Interface with LCD display is adjustable without removing the cover so changes can be made even in hazardous areas
316SS flameproof housing that meets IIC/Class 1 Div 1 to handle the toughest hazardous applications
The broadest range of operating temperatures in the industry, the perfect meter for difficult applications
Lower flow rates with the current lay lengths which means one meter style can be used for very low to high flow rates
Meter is designed to ASME B31.3 and the gasket sealing surface is per ASME, a rugged design that does not require special gaskets at installation
Weldneck flanges are standard for MT3809 and MT3810 which means full penetration welds that can easily be tested for integrity
Mechanical and alarm design that meets SIL 2 requirements

Features and Benefits



Improved Gasket Sealing Surface
- Gasket sealing surface meets ASME, special gaskets are not required

LCD Display
- Three line display
- Adjust with/without cover in place
- Multiple outputs can be displayed on one screen

Redesigned Scale
- White background/dark increments improve scale readability

High/Low Flow Alarms
- Flow rate can be constrained high, low or both high and low

New 316 Stainless Steel Flameproof Housing
- Meets IIC/Class 1 Division 1 hazardous area rating
- Broadest operating temperature of any VA meter

Weldneck Flanges
- Full penetration welds which can be examined for integrity

Product Description

316 SS Flameproof Housing

The 3809 flameproof housing has been redesigned and improved. The option is made of 316 stainless steel. This includes housing, cover, bracket and hardware. The new option now meets ATEX gas group IIC/NA class 1 Division 1. This is the highest gas protection rating available. Now this option can be used in more hazardous area applications. This option also has the broadest operating temperature range of any Variable Area meter. The new 3809 can be used in applications from -198°C to +420°C (-325°F to +788°F).

LCD Display

The 4-20 mA output transmitter is still available with remote analog output but now a LCD display is a new option. The LCD display supplies additional information locally such as totalization, alarm signals and the ability to make parameter changes. The changes can be made by removing the housing cover which is possible in a non-hazardous area. But in a hazardous area the display can be accessed with the cover in place using a supplied magnet.

Improved HART Transmitter, FounDATion™ Fieldbus and Alarm Option

The transmitter and alarm options can be used in applications from -198°C to +420°C (-325°F to +788°F). Every transmitter has HART Revision 7 capability. The transmitter and alarm options will have worldwide approvals including CSA (North America), ATEX (Europe), KOSHA (Korea), NEPSI (China) and TR CU (Custom Union including Russia). The alarm function has a safety certification of SIL 2. This option can be used in the toughest applications including safety systems.

[1] Air flows in scfm or scfh are given at 70°F and 14.7 psia

[2] Air flows in m_n^3/h or ln/h are given at 0°C and 1,013 bar(a)

[3] Water flows in l/h, gph and gpm are given at 70°F

[4] Minimum operating pressure required 7 psig / 0.48 bar

[5] For TFE lined gas applications operating pressure must be greater than 29 psia / 2 bar(a)

4-20mA w/ HART Transmitter, Alarms, Display & Pulse Output

Design Features

- 4-20 mA analog output for flowrate
- Bell-202 modulated HART digital communication over the 4-20 mA signal
- Current loop powered 2-wire connection
- User selectable 0% and 100% analog output ranges with optional smoothing
- Flexible (mix & match) units of measure for flowrates, totals, temperatures, densities, etc.
- Two flow totalizers: Resettable and inventory totalization
- User configurable, scalable pulse output for various engineering units
- Hi- and Lo-flow alarm output

Description

The 4-20 mA with HART transmitter is a compact microprocessor device designed to interface directly with the Model MT3809. This transmitter includes a Hi- and Lo alarm switch output and a pulse output.
The HART digital communication signals are superimposed on top of the 4-20 mA signal, allowing communication of more than just the process variable.
The transmitter is HART-programmable or for numerous variables such as flow rate, totalization, calibration factors, and high-low alarm parameters. It is programmable with easy-to-use hand held configurators. Prior to shipment, commonly used default values are programmed by Brooks to ensure ease of operation and quick startup. However, parameters may be reprogrammed by the user if needed. Flow rate information may be viewed locally at the meter scale, LCD display or displayed remotely.

Power supply voltage	21 to 30 Vdc: (2-wire current loop transmitter)
Loop current / current consumption range	3.8 to 22.0 mA.
Hi- and Lo-alarm outputs	Open collector alarm output Optically isolated outputs assignable to alarms. • Max. off-state voltage: 30 Vdc • Max. off-state current: 0,05 mA • Max. on-state voltage: 1.2 Vdc • Max. on-state current: 20 mA
Pulse Output	Optically isolated. Scalable to a variety of engineering unit systems (pulses per liter, gallons, etc.). • Range: 1 Hz to 1 kHz • Max. off-state voltage: 30 Vdc • Max. off-state current: 0.05 mA • Max. on-state voltage: 1.2 Vdc • Max. on-state current: 20 mA
Temperature Specification	See Temperature Cut-off Table
Electrical Connector	M20 x 1,5 according to ISO (1/2" NPT, 3/4" NPT (F) or cable gland optional) • Stainless steel cable gland cable diameter range 4-12 mm (Aluminum housing) • Stainless steel cable gland cable diameter range 7-10.5 mm (SS housing)
Linearity	Less than 1% at max. current.
Temperature influence	Less than 0.04% per °C.
Voltage influence	Less than 0.002% / Vdc.
Load resistance influence	± 0.1% full scale.
HART Revision	HART-7

FOUNDATION Fieldbus Transmitter, with Alarms, Display & Pulse Output

Design Features

- FoundATion™ Fieldbus digital communication network interface
- Ease of wiring and installation with a single 2-wire bus connection
- Powered over 2-wire FoundATion™ Fieldbus connection
- Flexible (mix & match) units of measure for flowrates, totals,temperatures, densities, etc.
- Two flow totalizers: Resettable and inventory totalization
- User configurable, scalable pulse output for various engineering units
- Hi- and Lo-flow alarm output

Description

The FoundATion™ Fieldbus transmitter is a compact microprocessor device designed to interface directly with the Model MT3809. The transmitter communicates over the 2-wire network per the international FoundATion™ Fieldbus standard for access to numerous variables such as flow rate, totalization, calibration factors, and high-low alarm parameters.

Power supply voltage	9-32Vdc
Power supply protection	Protected against reverse polarity
Current consumption	12 mA Entire transmitter is powered from 2-wire bus
Hi- and Lo-alarm outputs	Open collector alarm output Optically isolated outputs assignable to alarms. • Max. off-state voltage: 30 Vdc • Max. off-state current: 0,05 mA • Max. on-state voltage: 1.2 Vdc • Max. on-state current: 20 mA
Pulse Output	Optically isolated. Scalable to a variety of engineering unit systems (pulses per liter, gallons, etc.). • Range: 1 Hz to 1 kHz • Max. off-state voltage: 30 Vdc • Max. off-state current: 0.05 mA • Max. on-state voltage: 1.2 Vdc • Max. on-state current: 20 mA
Temperature Specification	See Temperature Cut-off Table
Electrical Connector	M20 x 1,5 according to ISO (1/2" NPT, 3/4" NPT (F) or cable gland optional) • Stainless steel cable gland cable diameter range 4-12 mm (Aluminum housing) • Stainless steel cable gland cable diameter range 7-10.5 mm (SS housing)
Linearity	Less than 1%
Temperature Influence	Less than 0.04% per °C
Voltage influence	Less than 0.002% / Vdc
FOUNDATION Fieldbus Revision	ITK6

Inductive Alarm Switches

Design Features
- 1 or 2 normally open inductive limit switches
- Optional intrinsically safe power supply/amplifier/relay unit
- For low or high limit signaling/switching
- Front adjustable
- Optional Relay Power Supply – recommended

Description
One or two electronic limit switches can be installed in the indicator housing to allow signaling or switching functions on a preset flow value. The limit switch operates as a slot initiator that is inductively actuated by a disc mounted on the pointer shaft. Any flow value can be used for setting the limit value by sliding the initiator along the indicator scale. Minimum setting distance between two limit switches is approximately 40% full scale. The position of the initiator also serves to visually indicate the signaling set value. Settings can be adjusted by removing the indicator cover, loosening, moving and retightening of the alarm indication needle, and replacement of the indicator front cover.

Power supply voltage	5 - 25 Vdc: (8 Vdc nominal)
Impedance	- Approximately 1 kohm with cam absent - Approximately 8 kohm with cam present
Ambient and process temperature	See Temperature Cut-off Table
Electrical Connector	M20 x 1,5 according to ISO (1/2" NPT, 3/4" NPT (F) or cable gland optional) • Stainless steel cable gland cable diameter range 4-12 mm (Aluminum housing) • Stainless steel cable gland cable diameter range 7- 10.5 mm (SS housing)

Optional Valves, Flow Controllers and Electronic Features

Optional Valves and Flow Controllers
Needle valves and flow controllers may be externally piped into the inlet or outlet side of the instrument. Needle valves can be supplied up to size 12 1-1/2" maximum 10000 l/hr / 46 gpm water equivalent. Needle valves and flow controllers will be supplied separately with the flanged meter.

Optional Electronic Features
Electronic equipment available with the Model MT3809 includes:
- Current loop 4-20 mA/HART Transmitter with Alarms and Pulse Output
- FOUNDATION Fieldbus Transmitter with Alarms and Pulse Output
- Inductive Alarms; stand-alone or in combination with above transmitters

Refer to the table below for the model code nomenclature for the electronics options. All models are designed to be either intrinsically safe or explosion proof.

Nomenclature and Type Designation

MT3809	...	B	...
I-IV	XV		

XV	Electronics configuration	B, C	Indicator with inductive alarm, 1 or 2 switches
		D ... L	Transmitter, 4 – 20 mA / Hart, with optionally: - pulse output - inductive alarm contact(s) - LOI or combinations thereof.
		M ... U	Transmitter, FOUNDATION Fieldbus, with optionally: - pulse output - inductive alarm contact(s) - LOI or combinations thereof.

						Special conditions for safe use: Enclosure contains glass & painted aluminum parts. If it is mounted in an area where the use of category 2G or 2D apparatus is required, it must be installed such that ignition source due to propagating brush discharge sparks are excluded. The actual maximum surface temperature of the equipment depends not on the equipment itself, but on operating conditions of the process fluid/gas flowing through the equipment. The equipment by itself does not generate heat. Due to this reason the temperature class is marked as a range. The maximum permitted ambient and process temperature limits can be found in the operating instructions. At start up especially for gas applications, ensure that the pressure is gradually increased through the piping system. A sudden pressure spike situation may result in a fast movement of the float within the VA flowmeter & the float may hit hard against the float stop. Supply grounding connection by the process connections or earthing terminal.

Service and Support

Brooks is committed to assuring all of our customers receive the ideal flow solution for their application, along with outstanding service and support to back it up. We operate first class repair facilities located around the world to provide rapid response and support. Each location utilizes primary standard calibration equipment to ensure accuracy and reliability for repairs and recalibration and is certified by our local Weights and Measures Authorities and traceable to the relevant International Standards.

Visit www.BrooksInstrument.com to locate the service location nearest to you.

START-UP SERVICE AND IN-SITU CALIBRATION

Brooks Instrument can provide start-up service prior to operation when required. For some process applications, where ISO-9001 Quality Certification is important, it is mandatory to verify and/or (re)calibrate the products periodically. In many cases this service can be provided under in-situ conditions, and the results will be traceable to the relevant international quality standards.

CUSTOMER SEMINARS AND TRAINING

Brooks Instrument can provide customer seminars and dedicated training to engineers, end users, and maintenance persons. Please contact your nearest sales representative for more details. Due to Brooks Instrument's commitment to continuous improvement of our products, all specifications are subject to change without notice.
